M THE AMERICAN MATHEMATICAL MONTHLY

Volume 106, Number 2

February 1999

Kenneth A. Ross	Yueh-Gin Gung and Dr. Charles Y. Hu Award for Distinguished Service to Leonard Gillman	97
Solomon Feferman	Does Mathematics Need New Axioms?	99
Gerald S. Goodman	Statistical Independence and Normal Numbers: An Aftermath to Mark Kac's Carus Monograph	112
Lyle N. Long Howard Weiss	The Velocity Dependence of Aerodynamic Drag: A Primer for Mathematicians	127
C. M. Cannell	George Green: An Enigmatic Mathematician	137

NOTES

Arthur T. Benjamin Kan Yasuda	Magic "Squares" Indeed!	153
Zoltán Sasvári	An Elementary Proof of Binet's Formula for the Gamma Function	157
Richard G. Swan	A Simple Proof of Rankin's Campanological Theorem	160

UNSOLVED PROBLEMS

Marc M. Paulhaus	Beggar My Neighbour	163
------------------	---------------------	-----

PROBLEMS AND SOLUTIONS

REVIEWS

Andrew Granville	<i>Notes on Fermat's Last Theorem.</i> By Alf van der Poorten	178
Frederick Leysieffer	<i>The Basic Practice of Statistics.</i> By David S. Moore	182

TELEGRAPHIC REVIEWS

186

NOTICE TO AUTHORS

The MONTHLY publishes articles, as well as notes and other features, about mathematics and the profession. Its readers span a broad spectrum of mathematical interests, and include professional mathematicians as well as students of mathematics at all collegiate levels. Authors are invited to submit articles and notes that bring interesting mathematical ideas to a wide audience of MONTHLY readers.

The MONTHLY's readers expect a high standard of exposition; they expect articles to inform, stimulate, challenge, enlighten, and even entertain. MONTHLY articles are meant to be read, enjoyed, and discussed, rather than just archived. Articles may be expositions of old or new results, historical or biographical essays, speculations or definitive treatments, broad developments, or explorations of a single application. Novelty and generality are far less important than clarity of exposition and broad appeal. Appropriate figures, diagrams, and photographs are encouraged.

Notes are short, sharply focussed, and possibly informal. They are often gems that provide a new proof of an old theorem, a novel presentation of a familiar theme, or a lively discussion of a single issue.

Articles and Notes should be sent to the Editor:

ROGER A. HORN
1515 Mineral Square, Room 142
University of Utah
Salt Lake City, UT 84112

Please send your email address and 3 copies of the complete manuscript (including all figures with captions and lettering), typewritten on only one side of the paper. In addition, send one original copy of all figures without lettering, drawn carefully in black ink on separate sheets of paper.

Letters to the Editor on any topic are invited; please send to the MONTHLY's Utah office. Comments, criticisms, and suggestions for making the MONTHLY more lively, entertaining, and informative are welcome.

See the MONTHLY section of MAA Online for current information such as contents of issues, descriptive summaries of forthcoming articles, tips for authors, and preparation of manuscripts in TEX:

<http://www.maa.org/>

Proposed problems or solutions should be sent to:

DANIEL ULLMAN, MONTHLY Problems
Department of Mathematics
The George Washington University
2201 G Street, NW, Room 428A
Washington, DC 20052

Please send 2 copies of all problems/solutions material, typewritten on only one side of the paper.
