

Designation: B 36/B 36M - 9501

Standard Specification for Brass Plate, Sheet, Strip, And Rolled Bar¹

This standard is issued under the fixed designation B 36/B 36M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

1. Scope*

1.1 This specification-covers establishes the requirements for brass plate, sheet, strip, and rolled bar of the following alloys:²

¹ This specification is under the jurisdiction of ASTM Committee B-5 <u>B05</u> on Copper and Copper Alloys and is the direct responsibility of Subcommittee B05.01 on Plate, Sheet, and Strip.

Current edition approved Feb. 15, 1995. Published April 1995. 10, 2001. Published August 2001. Originally published as B 36 - 20 T. Last previous edition B $36 - 91a^{c1}$. B 36/36M - 95.

1.2 The values stated in either inch-pound units or SI units are to be regarded separately as standard. Within the text, the SI units are shown in brackets. The values stated in each system—are may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from—the two systems may results in nonconformance with the—specification.³ standard.

2. Referenced Documents

- 2.1 The following documents-of in the <u>current</u> issue in effect on date of <u>material purchase</u> Book of Standards form a part of this specification to the extent referenced herein:
 - 2.2 ASTM Standards:
- B 248 Specification for General Requirements for Wrought Copper and Copper Alloy Plate, Sheet, Strip, and Rolled Bar³

² SAE Specifications CA210, CA220, CA230, CA240, CA260, CA268, and CA272 conform to the requirements for Copper Alloy UNS Nos. C21000, C22000, C23000, C24000, C26000, C26800, and C27200, respectively.

³ The UNS system for copper and copper alloys (see Practice E 527) is a simple expansion

³ Annual Book of the former standard designation system accomplished by the addition of a prefix "C" and a suffix "00." The suffix can be used to accommodate composition variations of the base alloy. ASTM Standards, Vol 02.01.

3. Ordering Information

- 3.1 Orders for material under this specification should include the General Requirements
- 3.1 The following-information:
- 3.1.1 Quantity,
- 3.1.2 Name sections of material: brass,
- 3.1.3 Form Specification B 248 [B 248M] constitute a part of material: plate, sheet, strip, or rolled bar,
- 3.1.4 Alloy number (see 1.1),
- 3.1.5 Temper (see Section 5),
- 3.1.6 Dimensions: thickness this specification:
- 3.1.1 Terminology
- 3.1.2 Materials and width, Manufacture
- 3.1.3 Dimensions, Mass, and length if applicable.
- 3.1.7 How furnished: rolls, stock lengths with or without ends, specific lengths with or without ends (see 8.4),
- 3.1.8 Type permissible Variations
- 3.1.4 Workmanship, Finish, and Appearance
- 3.1.5 Sampling
- 3.1.6 Number of edge, if required: slit, sheared, sawed, square corners, rounded corners, rounded edges, or full-rounded edges (see 8.6),
- 3.1.9 Type of width tests and straightness tolerances, if required: slit-metal tolerances, square-sheared-metal tolerances, sawed-metal tolerances, straightened or edge-rolled metal tolerances (see 8.3 and 8.5).
 - 3.1.10 ASTM Specification B 36/B 36M, year Retests
 - 3.1.7 Specimen Preparation
 - 3.1.8 Test Methods
 - 3.1.9 Significance of issue, Numerical Limits
 - 3.1.10 Inspection
 - 3.1.11 Rejection and whether inch-pound or SI units are applicable (see 1.2).
 - 3.1.11 Special tests or exceptions, if any. Rehearing
 - 3.1.12 Certification
 - 3.1.13 Test Reports
 - 3.1.14 Packaging and Package Marking
- 3.2 In addition, when material is purchased for agencies of the U. S. Government, it shall conform a section with a title identical to the Supplementary Requirements as defined that referenced in 3.1, appears in this specification, it contains additional requirements which supplement those appearing in Specification B 248 when specified in the contract or purchase order. [B 248M].

4. Terminology

4.1 For definitions of terms related to copper and copper alloys, refer to Terminology B 846.

5. Ordering Information

- 5.1 Orders for products should include the following information:
- 5.1.1 ASTM designation and year of issue,
- 5.1.2 Copper alloy UNS No. designation,
- 5.1.3 Quantity,
- 5.1.4 Form of material: plate, sheet, strip, or rolled bar,
- 5.1.5 Temper (Section 7),
- 5.1.6 Dimensions: thickness, width, and length if applicable,
- 5.1.7 Tolerances (Section 10),

⁴ Annual Book of ASTM Standards, Vol 023.01.

⁶ Annual Book of ASTM Standards, Vol 03.046.

∰ B 36/B 36M – 9501

- 5.1.8 How furnished: rolls, stock lengths with or without ends, specific lengths with or without ends (Section 10),
- 5.1.9 Type of edge, if required (Section 10),
- 5.1.10 When the product is purchased for agencies of the U.S. Government.
- 5.2 The following options are available and should be specified at the time of placing the order when required:
- 5.2.1 Heat identification or traceability details,
- 5.2.2 Certification,
- 5.2.3 Mill test report,
- 5.2.4 Special tests or exceptions, if any.
- 5.2.5 Supplemental requirements for agencies of the U.S. Government as given in Specification B 248 [B 248M].

6. Chemical Composition

- 46.1 The materials shall conform to the compositions prescribed chemical compositional requirements in Table 1.
- 4.2 These specification for the copper alloy UNS No. designation specified in the ordering information.
- 6.2 These composition limits do not preclude the presence of other elements. Limits for unnamed elements may be established and analysis required for unnamed elements by agreement between the manufacturer or supplier and purchaser.
- 46.3 Either copper or zinc may be taken as the difference between the sum of all elements analyzed and 100 %. When all elements in Table 1 are analyzed, their the sum of the results shall be as shown in the in the table as follows:

_	Copper Plus Named Elements, % min
Copper Alloy UNS No. Copper Alloy UNS No.	Copper Plus Named Elements, % min
C21000	99.8
C22000	99.8
C22600	99.8
C23000	99.8
C24000	99.8
C26000	99.7
C26800	99.7
C27200	99.7
C28000	99.7

57. Temper

57.1 As Hot-Rolled (M20)-Material—The standard temper of sheet and plate and produced by hot rolling is as designated in Table 2.

TABLE 1 Chemical Requirements

^A-Material shall be free from beta constituent when examined at a magnification of 75 diameters.

^B-Small amounts of beta constituent, if present, may interfere in some instances with severe forming or drawing; therefore, suitability for forming or drawing should be established between manufacturer and purchaser.

^C-It is anticipated that this material will contain the beta constituent that may interfere with severe forming or drawing operations.

TABLE 2 Tensile Strength Requirements and Approximate Rockwell Hardness Values for Rolled Temper (H) Product

Note 1—Plate is generally available in only the as hot-rolled (M20) temper. Required properties for other tempers shall be agreed upon between the manufacturer and the purchaser at the time of placing the order.

^AMPa (Mega Pascals) See Appendix X1.

^BRockwell hardness values apply as follows: the B scale values apply to metal 0.020 in. (0.508 mm) and over in thickness, and the 30-T scale values apply to metal 0.012 in. (0.305 mm) and over in thickness.

the-R standard designations are defined in Pracktice B 601 are shown.

- 7.4 Annealed-To-Temper (O)—The standard tempers of anneal—Hed-to-temper material are as designated in Table 5 with the prefix "O." Former designations—V and the standard designations as defined in Practice B 601 are shown.
 - 7.5 Special or nonstandard tempers are subject to negotiation between the manufacturer and purchaser (See 5.1.5).

8. Grain Size

- 8.1 Grain size shall be standard requirement for all products of the annealed (OS) tempers.
- 8.2 Acceptance or rejection based upon grain size shall depend only on the average grain size of the test specimens and shall be within the limits prescribed in Table 3 when determined in accordance with Test Methods E 112.
 - 8.3 The average grain size shall be determined on a plane parallel to the surface of the product.

9. Mechanical Properties

- 9.1 Tensile Strength Requirements of Rolled Tempers
- 9.1.1 Product furnished under this specification shall conform to the tensile strength requirements prescribed in Table 2 when tested in accordance with Test Methods E 8 [E 8M]. The test specimens shall be taken so the longitudinal axis of the specimen is parallel to the direction of rolling.

 $^{^{}A}$ ksi = 1000 psi.

tested in accordance with Test Methods E 8 [E 8M]. The test specimens shall be taken so the longitudinal axis of the specimen is parallel to the direction of rolling.

- 9.2.2 Acceptance or rejection based upon mechanical properties shall depend only on tensile strength.
- 9.3 Rockwell Hardness
- 9.3.1 The approximate Rockwell hardness values given in Table 2, Table 4, and Table 5 are for general information and assistance in testing and shall not be used as a basis for product rejection.

Note 1—Plate is generally available in only 1—The Rockwell hardness test offers a quick and convenient method of checking for general conformity to the as hot-rolled (M20) temper. Required properties specification requirements for temper, tensile strength and grain size.

10. Dimensions and Permissible Variations

- 10.1 The dimensions and tolerances for product described by this specification shall be agreed upon between as specified in Specification B 248 [B 248M] with particular reference to the manufacturer following related paragraphs in that specification.
 - 10.1.1 Thickness.
 - 10.1.2 Width:
 - 10.1.2.1 Slit Metal and Slit Metal With Rolle-pd Edges.
 - 10.1.2.2 Squareed-Shaseared Metal.
 - 10.1.2.3 Sawed Metal.
 - 10.1.3 Length:
 - 10.1.3.1 Specific and Stock Lengths Wimth and Without Ends.
 - 10.1.3.2 Schedule of Lengths (Specific and Stock) With Ends.
 - 10.1.3.3 Length Tolerances for Square-Sheared Metal.
 - 10.1.3.4 Length Tolerances for Sawed Metal.
 - 10.1.4 *Straightness:*
 - 10.1.4.1 Slit Metal or Slit Metal Either Straightened or Edge-Rolled.
 - 10.1.4.2 Squared-sheared Metal.
 - 10.1.4.3 Sawed metal.
 - 10.1.5 *Edges*:
 - 10.1.5.1 Square Edges.
 - 10.1.5.2 Rounded Corners.
 - 10.1.5.3 Rounded Edges.

^BMPa (Mega Pascals) See Appendix X1

EBRockwell hardness values apply as follows: The B scale applies to metal 0.020 (0.058 mm) in thickness and over; the 30T applies to metal 0.015 in. (0.381 mm) in thickness and over.

10.1.5.4 Full-Rounded Edges.

11. Test Methods

11.1 Chemical Analysis:

11.1.1 Composition shall be determined, in the order. case of disagreement, as follows:

6. Mechanical Properties

- 6.1 Tensile Strength of Rolled Tempers:
- 6.1.1 Products ordered to this specification in inch-pound units shall be tested in accordance with Test Methods E 8, and shall conform to tensile strength requirements prescribed in ksi units in Table 2.
- 6.1.2 Products ordered to this specification in SI units shall be tested in accordance with Test Methods E 8M, and shall conform to tensile strength requirements prescribed in MPa units in Table 2.
 - 6.1.3 Acceptance or rejection based on mechanical properties shall depend only on the tensile strength.
 - 6.1.4 Tension test specimens shall be taken so the longitudinal axis of the specimen is parallel to the direction of rolling.
 - 6.2 Tensile Strength of Annealed-to-Tempers:
 - 6.2.1 Products ordered to this specification in inch-pound units shall be tested in accordance with Test Methods E 8, and shall

B MPa (Mega Pascals) See Appendix X1.

^C Rockwell hardness values apply as follows: the B scale values apply

^{11.1.2} Test method(s) to metal 0.020 in. (0.508 mm) and over in thickness, and the 30-T scale values apply to metal 0.012 in. (0.305 mm) and over in thickness.

^{5.2} Rolled (H) Material—The standard tempers of rolled material are as designated in Table 2 with the prefix "H". Former designations and the standard designations as defined in Practice B 601 are shown. Special or nonstandard tempers are subject to negotiation between the manufacturer and the purchaser (See 3.1.5).

^{5.3} Annealed (OS) Material—The standard tempers of annealed material are as designated in Table 3 and Table 4. Nominal grain size and the standard designations as defined in Practice B 601 are shown. Special or nonstandard tempers are subject to negotiation between the manufacturer and the purchaser (see 3.1.5).

^{5.4} Annealed-To-Temper (O) Material— The standard tempers of annealed-to-temper material are as designated in Table 5 with the prefix "O". Former designations and the standard designations as defined in Practice B 601 are shown. Special or nonstandard tempers are subject to negotiation between the manufacturer and the purchaser (See 3.1.5).

conform to tensile strength requirements prescribed in ksi units in Table 5.

- 6.2.2 Products ordered to this specification in SI units shall be tested in accordance with Test Methods E 8M, and shall conform to tensile strength requirements prescribed in MPa units in Table 5.
 - 6.2.3 Acceptance or rejection based on mechanical properties shall depend only on the tensile strength.
 - 6.2.4 Tension test specimens shall be taken so the longitudinal axis of the specimen is parallel to the direction of rolling.
- 6.3 Rockwell Hardness—Since Rockwell hardness tests offer a quick and convenient method of checking brass of any temper followed for general conformity to the requirements for tensile strength or grain size, the approximate Rockwell hardness values for each temper are given in Table 2, Table 4, and Table 5 for general information and assistance in testing.

7. Grain Size determination of Annealed Tempers

7.1 Grain size shall be the standard test for material of all thicknesses in annealed tempers, and acceptance other element(s) resulting from contractual or rejection purchase order agreement shall depend on the grain sizes. The average grain size of each of two samples of annealed material as determined on a plane parallel to the surface of the material shall be within the limits prescribed in Table 3.

8. Dimensions and Permissible Variations

8.1 The inch-pound dimensions and tolerances for products covered by this specification shall be as prescribed in agreed upon between the current edition of Specification B 248, and the SI dimensions and tolerances covered by this specification shall be as prescribed in the current edition of Specification B 248M, with particular reference to Section 5 and the following tables of those specifications:

```
8.2 Thickness—See 4.2, Table 1.
8.3 Width:
8.3.1 Slit Metal and Slit Metal With Rolled Edges—See 4.3, Table 4.
8.3.2 Square-Sheared Metal—See 5.3, Table 5.
8.3.3 Sawed Metal—See 5.3, Table 6.
8.4 Length:
8.4.1 Specific and Stock Lengths With and Without Ends —See 5.4, Table 7.
8.4.2 Schedule of Lengths (Specific and Stock) With Ends—See 5.4, Table 8.
8.4.3 Length Tolerances for Square-Sheared Metal—Sec 5.4, Table 9.
8.4.4 Length Tolerances for Sawed Metal—See 5.4, Table 10.
8.5 Straightness:
8.5.1 Slit Metal manufacturer or Slit Metal Either Straightened or Edge-Rolled—See 5.5, Table 11.
8.5.2 Square-Sheared Metal—See 5.5, Table 12.
8.5.3 Sawed Metal—See 5.5, Table 13.
8.6 Edges—See 5.6.
8.6.1 Square Edges—See 5.6.1, Table 14.
8.6.2 Rounded Corners—See 5.6.2, Table 15.
8.6.3 Rounded Edges—See 5.6.3, Table 16.
```

9. General Requirements

- 9.1 Products furnished under this specification in inch-pound units shall conform to the applicable requirements of the current edition of Specification B 248.
- 9.2 Products furnished under this specification in the SI units shall conform to the applicable requirements of the current edition of Specification B 248M.

10. supplier and purchaser.

12. Keywords

1θ2.1 brass plate; brass rolled bar; brass sheet; brass strip

8.6.4 Full-Rounded Edges—Sec 5.6.4, Table 17.

APPENDIX

(Nonmandatory Information)

X1. METRIC EQUIVALENTS

X1.1 The SI unit for strength properties now shown is in accordance with the International System of Units (SI). The derived SI unit for force is the newton (N), which is defined as that force which when applied to a body having a mass of one kilogram gives it an acceleration of one metre per second squared ($N = kg \cdot m/s^2$). The derived SI unit for pressure or stress is the newton per square metre (N/m^2), which has been named the pascal (Pa) by the General Conference on Weights and Measures. Since 1 ksi = 6 894 757 Pa the metric equivalents are expressed as megapascal (MPa), which is the same as MN/m^2 and N/mm^2 .

SUMMARY OF CHANGES

Committee B05 has identified the location of selected changes to this standard since the last issue (B36/36M-95) that may impact the use of this standard.

- (1) This revision has brought this specification in line with the Outline of Form (Fifth Edition).
- (2) This revision has brought this specification in line with Standardizing of the use of the "M" designation.
- (3) The addition of Section 11.

ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM International Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
