Standard Specification for Asphalt Used in Dampproofing and Waterproofing¹

This standard is issued under the fixed designation D 449; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

^{ε1} NOTE—Editorially switched from English dominant to SI dominant.

1. Scope

1.1 This specification covers three types of asphalt suitable for use as a mopping coat in dampproofing; or as a plying or mopping cement in the construction of membrane waterproofing systems with felts conforming to Specification D 226; fabrics conforming to Specifications D 173 or D 1668 (asphalt types); asphalt-impregnated glass mat conforming to Specifications D 2178; and with primer conforming to Specification D 41.

1.2 The values stated in SI units are to be regarded as the standard. The values given in parentheses are for information only.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Classification

3.1 Asphalts covered by this specification include three types:

3.1.1 *Type I*—A soft, adhesive, “self-healing” asphalt that flows easily under the mop and is suitable for use below grade under uniformly moderate temperature conditions both during the process of installation and during service.

NOTE 1—Type I asphalt is suitable for foundations, tunnels, subways, etc.

3.1.2 *Type II*—A somewhat less susceptible asphalt than Type I, with good adhesive and “self-healing” properties, suitable for use above grade where it will not be exposed to temperatures exceeding 50°C (122°F).

NOTE 2—Type II asphalt is suitable for railroad bridges, culverts, retaining walls, tanks, dams, conduits, spray decks, etc.

3.1.3 *Type III*—An asphalt less susceptible to temperature than Type II, with good adhesive properties, and suitable for use above grade on vertical surfaces exposed to direct sunlight or temperatures above 50°C (122°F).

4. Materials and Manufacture

4.1 The asphalt shall be prepared from crude petroleum by suitable refining processes to conform to the applicable physical requirements for each type.

5. Physical Requirements

5.1 The asphalt shall be homogeneous and free of water.

⁵ Discontinued—See 1984 *Annual Book of ASTM Standards*, Vol 04.04.

 **D 449**

5.2 Each type shall conform to the appropriate requirements prescribed in Table 1.

6. Sampling and Test Methods

6.1 Sample the material and determine the properties enumerated in this specification in accordance with the following methods:

- 6.1.1 *Sampling*—Practice D 140.
- 6.1.2 *Softening Point*—Test Method D 2398.
- 6.1.3 *Flash Point*—Test Method D 5.
- 6.1.4 *Penetration*—Test Method D 5.
- 6.1.5 *Ductility*—Test Method D 113.
- 6.1.6 *Solubility in Trichloroethylene*—Test Method D 2042.

7. Inspection and Certification

7.1 Inspection and certification of the material shall be as agreed upon between the purchaser and the seller. Specific requirements shall be made part of the purchase contract.

8. Rejection and Rehearing

8.1 If the results of any test do not conform to the requirements of this specification, retesting to determine conformity may be performed as agreed upon between the purchaser and the seller.

9. Packaging and Marking

9.1 The material shall be suitably packaged to permit acceptance by the carrier and to afford adequate protection from the normal hazards of handling and shipment.

9.2 Each container shall be plainly marked with the name and brand of the manufacturer or seller.

10. Keywords

10.1 asphalt; dampproofing; fabrics; waterproofing

TABLE 1 Physical Requirements of Asphalt Used in Dampproofing and Waterproofing

	Type I		Type II		Type III	
	Min	Max	Min	Max	Min	Max
Softening point (ring-and-ball), °C (°F)	46 (115)	60 (140)	63 (145)	77 (170)	82 (180)	93 (200)
Flash point (Cleveland open cup), °C (°F)	232 (450)	...	232 (450)	...	246 (475)	...
Penetration:						
0°C (32°F), 200 g, 60 s; 0.1 mm	5	...	10	...	10	...
25°C (77°F), 100 g, 5 s; 0.1 mm	50	100	25	50	20	40
46°C (115°F), 50 g, 5 s; 0.1 mm	100	130	...	100
Ductility at 25°C (77°F), cm	30	...	10	...	2	...
Solubility in trichloroethylene, %	99	...	99	...	99	...

The American Society for Testing and Materials takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, 100 Barr Harbor Drive, West Conshohocken, PA 19428.
