

Designation: **E 1826 – 9600**

An American National Standard

Standard Specification for Low Volatile Organic Compound (VOC) Corrosion-Inhibiting Adhesive Primer for Aluminum Alloys to Be Adhesively Bonded¹

This standard is issued under the fixed designation E 1826; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification is for pigmented, sprayable, low volatile organic compound (VOC) corrosion-inhibiting adhesive primers for use on aluminum alloys that are to be adhesively bonded in the fabrication of panels for tactical shelters. When applied to a properly prepared surface of aluminum alloy, the primer imparts corrosion resistance and forms a surface suitable for structural bonding and for coating with shelter paint finishes.

1.2 The values stated in SI units are to be regarded as the standard where only SI units are given or where SI units are given first followed by inch-pound units; where inch-pound units are given first followed by SI units, the inch-pound units are to be regarded as the standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

2.3 *Government Document:*

Rule 1124 Aerospace Assembly and Component Manufacturing Operations, South Coast Air Quality Management District⁶

3. Materials and Manufacturer

3.1 The primer shall be a pigmented liquid composed of a modified epoxy phenolic or other resin system compounded to be spray-applied to produce a continuous, uniform coating without dilution.

4. Physical Properties

4.1 The uncured primer shall be tested as specified in 5.1 and meet the requirement of Table 1.

4.2 *Properties of Cured Film*—When applied and cured in accordance with 5.1.8, the cured film shall meet the requirements of Tables 2 and 3 when tested as specified in 5.2 and 5.3.

4.3 *Storage Stability*—Primer stored in accordance with 5.1.3 shall meet the requirements for normal- and low-temperature floating roller peel in Table 3 when cured in accordance with 5.1.8 and tested as specified in 5.3.7 and 5.3.8.

4.4 *Pot Shelf Life*—The ~~pot~~ shelf life of the primer at $25 \pm 7^\circ\text{C}$ ($77 \pm 12^\circ\text{F}$) shall be at least four days. After four days, when tested according to 5.1.4, the primer shall meet the requirements for normal- and low-temperature floating roller peel in Table 3 when cured in accordance with 5.1.8 and tested as specified in 5.3.7 and 5.3.8.

4.5 *Film Thickness*—The average, minimum, and maximum film thicknesses shall be between 0.0025 and 0.010 mm (0.0001 and 0.0004 in.) $\pm 15\%$ coefficient of variation. At least five thickness readings shall be made with no more than one in any 645 mm² (1 in.²) area.

4.6 *VOC Content*—The volatile organic compound (VOC) is any volatile compound containing the element of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonates, as stated in Rule 1124. The VOC content shall meet the requirement in Table 1 when determined in accordance with 5.1.9.

5. Test Methods

5.1 *Uncured Primer:*

5.1.1 *Solids Content*—Determine the solids content by heating a 2-g sample of thoroughly mixed primer in an ignition-loss crucible with cover at $121 \pm 5^\circ\text{C}$ ($250 \pm 9^\circ\text{F}$) for not less than 90 min. Cool the crucible to room temperature in a desiccator. Weighings before and after heating shall be accurate to ± 0.001 g. Calculate the mass of solids remaining as a percentage of the initial sample mass as follows:

$$\text{Percent solids content} = \frac{\text{mass of nonvolatile residue}}{\text{initial sample mass}} \times 100 \quad (1)$$

5.1.2 *Ash Content*—Place the crucibles containing the solids content samples in a furnace at $565 \pm 28^\circ\text{C}$ ($1050 \pm 82^\circ\text{F}$) for not less than 60 min. Cool the crucible to room temperature in a desiccator. Weighings before and after heating shall be accurate to ± 0.001 g. Calculate the ash content remaining as a percentage of the solids content as follows:

TABLE 1 Physical Properties of Uncured Liquid Polymer

Test	Requirement
Solids content, %	Report only
Ash content, %	Report only
Color	Easily visible film
VOC content	250 g/L max

TABLE 2 Physical Property of Cured Film on Primed Surfaces

Test	Requirement
Smooth uniform coating	0.0025 to 0.010 mm (0.0001 to 0.0004 in.) ± 15 % coefficient of variation

TABLE 3 Physical Properties of Bonded Specimens

Test	Requirements (min)
Normal-temperature lap shear, 24°C (77°F), MPa (psi)	20.0 (2903)
Low-temperature lap shear, -55°C (-67°F), MPa (psi)	20.0 (2903)
High-temperature lap shear, 93°C (200°F), MPa (psi)	13.0 (1890)
Humidity exposure lap shear, 93°C (200°F), MPa (psi)	8.0 (1161)
Salt spray exposure lap shear, 35°C (95°F), MPa (psi)	16.0 (2322)
Normal-temperature floating roller peel strength, 24°C (75°F), N/m (lbf/in.)	4400 (25.1)
Low-temperature floating roller peel strength, -55°C (-67°F), N/m (lbf/in.)	2625 (15.0)

$$\text{Percent ash content} = \frac{\text{mass of ash residue}}{\text{mass of nonvolatile residue}} \times 100 \quad (2)$$

5.1.3 *Storage Stability*—Store a sample of the primer for three months from the date of manufacture at a temperature recommended by the manufacturer. The stored sample shall meet the requirements for normal- and low-temperature floating roller peel in Table 3 when cured in accordance with 5.1.8 and tested as specified in 5.3.7 and 5.3.8.

5.1.4 *Pot Shelf Life*—Store a sample of the primer for four days at $25 \pm 7^\circ\text{C}$ ($77 \pm 13^\circ\text{F}$). The aged sample shall meet the requirements for normal- and low-temperature floating roller peel in Table 3 when cured in accordance with 5.1.8 and tested as specified in 5.3.7 and 5.3.8.

5.1.5 *Film Thickness*—The cured primer film thickness shall be determined with an eddy-current instrument as specified in 5.2.2.

5.1.6 *Color*—During spray application, there shall be a discernible color change for the primer thickness specified in 4.5.

5.1.7 *Sprayability*—The primer shall be capable of being readily applied in accordance with the manufacturer’s instructions to all test panels of either 6061 T6 or 5052 H34 aluminum alloy (Fed. Spec. QQ-A-250/11d or QQ-A-250/8d, respectively) and cleaned in accordance with Practice E 864 for each of the tests described in 5.1.8-5.3.8.

5.1.8 *Curing Properties*—Test the cured film for the ability to meet the requirements listed in Tables 2 and 3. Spray the primer onto the test panels and air dry at least 20 min at $24 \pm 5^\circ\text{C}$ ($77 \pm 9^\circ\text{F}$); then heat in air for 65 ± 5 min at $121 \pm 5^\circ\text{C}$ ($250 \pm 9^\circ\text{F}$).

5.1.9 *VOC Content*—The grams of VOC per litre of primer, less water and exempt compounds per Rule 1124, shall be determined by the adhesive primer manufacturer in accordance with Rule 1124 and meet the requirement for VOC content in Table 1.

5.2 Cured Film:

5.2.1 *Test Panels and Panel Preparation*— Test panels shall be either 6061 T6 or 5052 H34 bare aluminum alloy (Fed. Spec. QQ-A-250/811d or QQ-A-250/H8d, respectively) and cleaned in accordance with Practice E 864.

5.2.2 *Smooth Uniform Coating*—Clean a 30 by 30 cm (12 by 12 in.) panel, spray to a primer thickness as specified in 4.5, and cure as specified in 5.1.8. Determine the primer thickness with a Fisher isoscope MP2-T3.3B (or equivalent) calibrated with standards between 0.0025 and 0.010 mm (0.0001 and 0.0004 in.). The primer thickness shall meet the requirements in 4.5 and Table 2.

5.2.3 *Pencil Hardness*—Determine the pencil hardness of the cured film using the following procedure:

5.2.3.1 *Preparation of Pencils*—Prepare a set of drawing pencils ranging in hardness from 6B to 5H by stripping the wood away from the end approximately 10 mm ($\frac{3}{8}$ in.) without damaging the lead. Square the tip of the lead by holding the pencil in a vertical position and moving the lead back and forth over 400-grit or finer abrasive paper. Square the tip of the lead after each trial.

5.2.3.2 *Procedure*—Place a test panel with the cured primer applied in a horizontal position. Push pencils of increasing hardness at a 45° angle into the coated surface of the panel until one is found that will cut or scratch the coating. Use the number of this pencil to express the primer hardness.

5.2.4 *Environmental Resistance Test*— Clean three test panels for each test described in 5.2.5-5.2.7 approximately 76 by 127 mm (3 by 5 in.) in accordance with 5.2.1. Apply the primer and cure in accordance with 4.5 and 5.1.8. The primed panels shall be subjected to the environments specified in 5.2.5-5.2.7 and there shall be no cracking, no blistering, and a minimum pencil hardness of 4H.

5.2.5 *Water Resistance*—Immerse the panels with the cured primer coating in distilled water for seven days at $24 \pm 3^\circ\text{C}$ ($75 \pm 5^\circ\text{F}$) and then expose to 95 to 100 % relative humidity at $50 \pm 3^\circ\text{C}$ ($121 \pm 5^\circ\text{F}$) for 30 days. After exposure the panels shall meet the requirements in 5.2.4, and there shall be no loss of adhesion as described in 5.2.8.

5.2.6 *Heat Resistance*—Heat test panels prepared as in 5.2.4 at $120 \pm 3^\circ\text{C}$ ($248 \pm 5^\circ\text{F}$) for 70 h. After exposure the panels shall meet the requirements in 5.2.4, and there shall be no loss of adhesion as described in 5.2.8.

5.2.7 *Corrosion Resistance*—Scribe test panels prepared in accordance with 5.2.4 through the coating to the base metal with two diagonal scribe marks extending from corner to corner and then expose them to 5 % salt fog in accordance with Practice B 117 for 40 days. After exposure the panels shall meet the requirements in 5.2.4, and there shall be no undercutting of the primer along the scribe lines.

5.2.8 *Loss of Adhesion:*

5.2.8.1 Thoroughly dry the panel by wiping with a clean dry cheesecloth. Conduct the test at 20 to 27°C (68 to 81°F).

5.2.8.2 Scribe two parallel scratches 25 mm (1 in.) apart through the coating down to the metal with a sharp edged scribe.

5.2.8.3 Apply a strip of 25-mm (1-in.) wide masking tape (not more than five months old from date of manufacture) across the scratches at 90° to the scribe lines in the panel area to be tested. Press the tape down using two passes of a 2-kg (4.4-lb) rubber-covered roller approximately 90 mm (3.5 in.) in diameter by 44.5 mm (1.75 in.) in width. The durometer of the roller surface shall be 70 to 80 Shore A.

5.2.8.4 As an alternative to 5.2.8.3, the tape shall be pressed down by rolling the tape roll along the strip of applied tape using a firm hand pressure of approximately 2 kg (4.4 lb).

5.2.8.5 Remove the tape in one abrupt motion perpendicular to the panel. No primer shall be removed from the panel, other than that previously removed during the scribing procedure in 5.2.8.2.

5.3 *Bonding Property Tests:*

5.3.1 *Preparation of Test Specimens*—Prepare five specimens in accordance with Practice E 864 for each of the tests in Table 3. The lap shear specimens shall be in accordance with Test Method D 1002 and the peel specimens in accordance with Test Method D 3167. The adherents shall be of either 6061 T6 or 5052 H34 aluminum alloy. Apply the primer and allow to air dry for not less than 20 min at 25 ± 5°C (78 ± 9°F); follow by heating at 121 ± 5°C (250 ± 9°F) for 65 ± 5 min. Bond and cure in accordance with Specification E 865.

5.3.2 *Normal-Temperature Lap Shear*—Subject each specimen to a lap shear test at 25 ± 3°C (77 ± 5°F) in accordance with Test Method D 1002.

5.3.3 *Low-Temperature Lap Shear*—Test each specimen in accordance with Test Method D 1002 for low-temperature lap shear at -55 ± 3°C (-66 ± 5°F). Bring the temperature of the specimen to -55 ± 3°C (-66 ± 5°F) as indicated by a thermocouple at the bond area and stabilize for 10 min prior to test. The test chamber used to test the specimens shall be stabilized at the test temperature for at least 45 min prior to testing.

5.3.4 *High-Temperature Lap Shear*—Test each specimen in accordance with Test Method D 1002 for high-temperature lap shear at 93 ± 3°C (200 ± 5°F). Bring the temperature of the specimen to 93 ± 3°C (200 ± 5°F) as indicated by a thermocouple at the bond area and stabilize for 10 min prior to test. The test chamber used to test the specimens shall be stabilized at the test temperature for at least 45 min prior to testing.

5.3.5 *Humidity Exposure Lap Shear*—Test each specimen in accordance with Test Method D 1002 at 93 ± 3°C (200 ± 5°F) for lap shear strength after two weeks exposure at 95 ± 5 % relative humidity at 71 ± 3°C (160 ± 5°F). After removing the specimens from the humidity cabinet, place them and a wet paper towel in a sealed plastic bag. Bring the temperature of the specimen to 93 ± 3°C (200 ± 5°F) as indicated by a thermocouple at the bond area. Stabilize the specimen 2 min prior to test. Test the specimens within 24 h after removal from the humidity cabinet. The test chamber used to test the specimens shall be stabilized at the test temperature for at least 45 min prior to testing.

5.3.6 *Salt Spray Exposure Lap Shear*—Test each specimen in accordance with Test Method D 1002 after exposure for two weeks to salt spray using 5 % NaCl solution at 35 ± 1°C (95 ± 2°F) in accordance with Practice ~~D~~ B 117.

5.3.7 *Normal-Temperature Floating Roller Peel Strength*—Test each specimen in accordance with Test Method D 3167. The test temperature shall be 25 ± 3°C (77 ± 5°F).

5.3.8 *Low-Temperature Floating Roller Peel Strength*—Test each specimen according to Test Method D 3167. The test temperature shall be -55 ± 3°C (-66 ± 5°F) as indicated by a thermocouple attached to the thin member. Stabilize the specimen at the test temperature for 10 min prior to test. The test chamber used to test the specimens shall be stabilized at the test temperature for at least 45 min prior to testing.

6. Report

6.1 The report shall include the following information:

6.1.1 Complete identification of the adhesive used to obtain the physical properties of bonded specimens including source, the manufacturer's code number, and date of manufacture.

6.1.2 Failure mode of bonded specimens used to obtain the physical properties.

7. Inspection

7.1 *Responsibility for Inspection*—Unless otherwise specified in the contract or purchase order, the supplier is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or order, the supplier may use any facilities suitable for the performance of inspection requirements specified herein unless disapproved by the purchaser. The purchaser has the right to perform any of the inspections described in this specification where such inspections are necessary to assure compliance with the requirements.

7.2 *Classification of Inspections*—The inspection requirements specified herein are classified as follows:

- 7.2.1 Qualification inspection (see 7.3) and
- 7.2.2 Incoming shipment inspection (see 7.4).

7.3 *Qualification Inspection:*

7.3.1 *Qualification Test*—Adhesive primers in Section 5 that have previously passed the tests, but have subsequently been modified in any manner, must be tested against this specification and shown to meet its requirements.

7.3.1.1 *Instruction Sheet*—A dated, coded, and titled instruction sheet outlining instructions for use of the adhesive primer shall be supplied by the manufacturer. Two copies of these instructions shall be forwarded with the test report (see 7.3.2) when requesting qualification. In addition, a copy of the instruction sheet shall accompany each shipment of the adhesive primer. At the option of the purchaser, the tests specified in Section 5 may be repeated at any time on material previously found satisfactory.

7.3.2 *Test Report*—In addition to the test specimens cited herein, the manufacturer shall furnish a dated and numbered report certified by notarized affidavit giving the results of all tests listed in Section 5. The individual and average values for the tests shall be reported. The test report shall cover all requirements of Section 4. Exact information as to how the individual specimens are fabricated including materials, component material preparation, and their processing into samples as well as complete testing information for each test, such as test apparatus, crosshead speeds, etc., shall be reported. The report shall certify that the application of the primer conformed to the description given in the instruction sheet.

7.4 *Incoming Shipment Inspection/Purchaser and Supplier Acceptance Tests*—The inspection of each incoming lot of adhesive primer purchased under this specification shall consist of the following:

- 7.4.1 *Normal-Temperature Lap Shear*—In accordance with 5.3.2,
- 7.4.2 *Normal-Temperature Floating Roller Peel*—In accordance with 5.3.7,
- 7.4.3 *Solids Content*—In accordance with 5.1.1, and
- 7.4.4 *Inhibitor Content*—In accordance with 5.1.2.

8. Packaging and Identification

8.1 *Packaging*—The product shall be packaged in airtight containers suitable for storage at 3°C (37°F).

8.2 *Identification*—Each container shall be identified with the following information on durable labels, using clearly legible characters that will not be obliterated by normal handling:

- 8.2.1 Primer, adhesive, corrosion-inhibiting,
- ~~8.2.2 ASTM designation (this specification number);~~
- ~~8.2.3 Date~~
- 8.2.2 Date of manufacture (month and year),
- 8.2.43 Manufacturer's name and address,
- 8.2.54 Manufacturer's product trade name,
- 8.2.65 Manufacturer's product type designation,
- 8.2.76 Manufacturer's batch/lot designation,
- ~~8.2.8 Contract number;~~
- ~~8.2.9 Date of shipment;~~
- ~~8.2.10 Expiration date;~~
- ~~8.2.11 Unit quantity;~~
- ~~8.2.12 Perishable;~~
- 8.2.7 Perishable, ship and store according to manufacturer's recommendations (do not freeze),
- 8.2.138 Appropriate materials safety data sheets (MSDS), and
- 8.2.149 Manufacturer's certification that the batch and lot meet the requirements of this specification. See Practice E 874.

8.3 *Packing*—The individual containers shall be packed in an exterior shipping container capable of protecting the product and maintaining the required temperature during transit.

8.4 *Exterior Marking*—Each exterior shipping container shall be legibly marked as in 8.2, plus:

- 8.4.1 ASTM designation (this specification number),
- 8.4.2 Contract number,
- 8.4.3 Date of shipment,
- 8.4.4 Warranty date,
- 8.4.5 Quantity.

8.5 *Containers*—Containers shall be prepared for shipment in accordance with commercial practice to assure carrier acceptance and safe transportation to point of delivery. Packaging shall conform to carrier rules and regulations applicable to the mode of transportation. In addition to the exterior marking in 8.4, the exterior container shall be marked to comply with ICC regulations applicable to the mode of transportation.

9. Keywords

- 9.1 adhesive bond; corrosion-inhibiting primer; film adhesive; low VOC; relocatable shelters

ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM International Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
