

Standard Specification for Folded Poly(Vinyl Chloride) (PVC) Pipe for Existing Sewer and Conduit Rehabilitation¹

This standard is issued under the fixed designation F 1504; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

^{ε1} NOTE—Sections 6.1 and 15.2.3 and Tables 3 and 4 were editorially updated in July 2002.

^{ε2} NOTE—Section 17 was editorially added in December 2002.

1. Scope

1.1 This specification covers requirements and test methods for materials, dimensions, workmanship, flattening resistance, impact resistance, pipe stiffness, extrusion quality, and a form of marking for folded (vinyl chloride) (PVC) pipe for existing sewer and conduit rehabilitation.

1.2 Pipe produced to this specification is for use in non-pressure sewer and conduit rehabilitation where the folded PVC pipe is inserted into and then expanded to conform to the wall of the original conduit forming a new structural pipe-within-a-pipe.

NOTE 1—An ASTM specification for the installation of folded PVC pipe is under preparation and will be referenced in this specification when published.

1.3 This specification includes pipe made only from materials specified in Section 6. This specification does not include pipe manufactured from reprocessed, recycled, or reclaimed PVC.

1.4 The values stated in inch-pound units are to be regarded as the standard. The SI units given in parentheses are provided for information only.

1.5 The following precautionary statement pertains to the test method portion only, Section 11, of this specification: *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Terminology

3.1 *General*—Abbreviations used in this specification are in accordance with Terminology D 1600 and definitions are in accordance with Terminology F 412 unless otherwise indicated.

3.2 *Definitions of Terms Specific to This Standard:*

3.2.1 *folded pipe*—pipe that has been manufactured in a folded shape or that is subsequently folded for use in existing sewer and conduit rehabilitation. See Fig. 1.

3.2.2 *rounded pipe*—A rounded pipe is a sample for test purposes formed when the folded pipe has been inserted into a circular casing pipe and expanded with heat and pressure to fit tightly to the casing pipe taking a circular cross section, in accordance with Section 10. See Fig. 1.

4. Significance and Use

4.1 The requirements of this specification are intended to provide folded pipe suitable for the rehabilitation of existing pipelines and conduits conveying sewage, process flow, and storm water, under gravity flow conditions, through the heating, insertion, and expansion of the folded pipe.

NOTE 2—Industrial waste disposal lines should be installed only with the specific approval of the cognizant code authority since chemicals not commonly found in drains and sewers and temperatures in excess of 140°F (60°C) may be encountered.

5. Application of Materials

5.1 The nominal folded PVC pipe sizes specified in Section 8 are applicable for a range of original pipe inside diameters. Table 1 lists the recommended ranges for each nominal size.

² Annual Book of ASTM Standards, Vol 08.01.

³ Annual Book of ASTM Standards, Vol 08.04.

⁴ Available from Standardization Documents Order Desk, Bldg. 4 Section D, 700 Robbins Ave., Philadelphia, PA 19111-5094, Attn: NPODS.

NOTE—This figure is intended only for clarification of terms specific to this specification and shows a representative folded pipe shape. Other folded pipe shapes may meet the requirements of this specification.

FIG. 1 Folded Pipe and Rounded Pipe—Clarification of Terms

TABLE 1 Folded PVC Pipe, Recommended Size Ranges of Use

NOTE—The minimum and maximum recommended existing pipe inside diameters shown in Table 1 are mean inside diameters along the pipe length and are not intended as absolute limits on localized dimensions. Consult the manufacturer for use of folded PVC pipe for sizes of existing pipe beyond the recommended ranges shown in Table 1.

Folded Pipe Nominal Outside Diameter, in. (mm)	Recommended Existing Pipe Inside Diameter Range, in. (mm)		Resulting DR over Diameter Range		
	min	max	DR 50	DR 41	DR 35
4 (102)	3.7 (94)	4.2 (107)	32–40
6 (152)	5.6 (142)	6.3 (160)	...	38–46	32–40
8 (203)	7.4 (188)	8.4 (213)	47–55	38–46	32–40
9 (229)	8.3 (211)	9.4 (239)	47–55	38–46	32–40
10 (254)	9.3 (236)	10.5 (267)	47–55	38–46	32–40
12 (305)	11.3 (287)	12.8 (325)	47–55	38–46	32–40
15 (381)	13.9 (353)	15.7 (399)	47–55	38–46	32–40

6. Materials and Manufacture

6.1 *Basic Materials*—The pipe shall be made from virgin PVC compound meeting all the requirements for cell classifications 12334, ~~12344~~, or 13223 as defined in Specification D 1784.

6.2 *Rework Material*—Clean rework material, generated from the manufacturer’s own PVC sewer pipe production may be used by the same manufacturer provided that the rework material meets the requirements of 6.1 and that the pipe produced meets all the requirements of this specification.

7. Other Requirements

7.1 *Pipe Flattening*—There shall be no evidence of splitting, cracking, or breaking when the rounded pipe is tested in accordance with 11.3.

7.2 *Pipe Impact Strength*—The impact strength of the rounded pipe shall not be less than the values given in Table 2 when tested in accordance with 11.4.

NOTE 3—This test is intended only for use as a quality-control test, not as a simulated service test.

7.3 *Pipe Stiffness*—Pipe stiffness values for the rounded pipe shall comply with Table 3 when tested in accordance with 11.6.

7.4 *Extrusion Quality*—The extrusion quality of the pipe shall be evaluated by both of the following test methods.

7.4.1 *Acetone Immersion*—The pipe shall not flake or disintegrate when tested in accordance with 11.6.1.

7.4.2 *Heat Reversion*—The extrusion quality shall be estimated by heat reversion method in accordance with 11.6.2.

7.5 *Flexural Properties*—Flexural modulus of elasticity values for the rounded pipe shall comply with Table 4 when tested in accordance with 11.7.

8. Dimensions, Mass, and Permissible Variations

8.1 *Rounded Pipe Diameter*—The average outside diameter of the rounded pipe shall meet the requirements given in Table 5 with a tolerance of ±1.0 % when measured in accordance with 11.2.1.

8.2 *Rounded Pipe Wall Thickness*—The minimum wall thickness of the rounded pipe, when measured in accordance with 11.2.2, shall not be less than the values specified in Table 5.

9. Workmanship, Finish, and Appearance

9.1 The rounded and folded pipes shall be homogeneous throughout and free from visible cracks, holes, foreign inclusions, or other injurious defects. The pipe shall be as uniform as commercially practical in color, opacity, density, and other physical properties.

TABLE 2 Minimum Impact Strength at 73°F (23°C)

Pipe Size, in. (mm)	Impact Strength, ft-lbf (J)
4 (102)	150 (203)
6 (152)	210 (284)
8 (203)	210 (284)
9 (229)	220 (299)
10 (254)	220 (299)
12 (305)	220 (299)
15 (381)	220 (299)

TABLE 3 Minimum Pipe Stiffness at 5 % Deflection

NOTE—Higher stiffness, due to higher moduli or lower DR, may also be available; consult the manufacturer.

Pipe Size, in. (mm)	Pipe Stiffness, psi (kPa)							PS-3 DR-41
	PS-1 ^A			PS-2 ^B			PS-3 DR-41	
	DR 50	DR 41	DR 35	DR 50	DR 41	DR 35		
DR-50								
4 (102)	31 (219)	36 (250)
6 (152)	...	19 (134)	31 (219)	...	22 (153)	36 (250)	...	25 (174)
8 to 15 (203 to 381)	10 (73)	19 (134)	31 (219)	12 (83)	22 (153)	36 (250) ^C (97)	...	25 (174)

^A PS-1 is for material with a minimum cell classification of 13223 (280 000-psi (1.93 Gpa) minimum modulus).
^B PS-2 is for material with a minimum cell classification of 12334 (320 000-psi (2.21 Gpa) minimum modulus).
^C PS-3 is for material with a minimum cell classification of 12344 (360 000 psi (2.48 Gpa) minimum modulus).

TABLE 4 Rounded Pipe Flexural Properties

Cell Classification	Flexural Modulus, psi (GPa)
13223	280 000 (1.93)
12334	320 000 (2.21)
12344	360 000 (2.48)

TABLE 5 Rounded Pipe Dimensions

Outside Diameter, in. (mm)	Minimum Wall Thickness, in. (mm)		
	DR 50	DR 41	DR 35
4.000 (101.6)	0.114 (2.9)
6.000 (152.4)	...	0.146 (3.7)	0.171 (4.3)
8.000 (203.2)	0.160 (4.1)	0.195 (5.0)	0.229 (5.8)
9.000 (228.6)	0.180 (4.6)	0.219 (5.6)	0.257 (6.5)
10.000 (254.0)	0.200 (5.1)	0.243 (6.2)	0.286 (7.3)
12.000 (304.8)	0.240 (6.1)	0.292 (7.4)	0.343 (8.7)
15.000 (381.0)	0.300 (7.6)	0.365 (9.3)	0.429 (10.9)

10. Sampling

10.1 Rounded pipe sample preparation shall involve the unfolding and expansion of a folded pipe sample within a split pipe mold with an inside diameter equal to the nominal outside diameter shown in Table 2. A folded pipe sample of sufficient length (10 ft (3 m) maximum) to complete the testing requirements shall be inserted into the split pipe mold and secured at the ends. The assembly shall then be placed in an enclosed chamber for heating. Ambient pressure steam shall be applied to the chamber for at least a 15-min period at a minimum temperature of 200°F (93°C). While maintaining the minimum 200°F temperature, the folded pipe shall then be rounded by applying internal steam pressure at 8 psig (55 kPa) for a period of 2 min. While maintaining the 8-psig internal pressure, transition to air pressure and cool the sample to 100°F (38°C) or less. Remove the rounded sample from the mold for testing.

10.2 The frequency of sampling shall be as agreed upon between the purchaser and the seller.

10.3 Initial and retest samples shall be drawn from the same production shift.

11. Test Methods

11.1 *Test Conditions*—Conduct tests in the standard laboratory atmosphere of 73.4 ± 3.6°F (23 ± 2°C) and 50 ± 5 % relative humidity, with test specimens conditioned in accordance with Procedure A of Practice D 618, unless otherwise specified in the test methods or in this specification.

11.2 Rounded Pipe Dimensions:

11.2.1 *Pipe Diameters*—Measure the outside diameter of the pipe in accordance with the applicable section of Test Method D 2122. Either a tapered sleeve gage or a vernier circumferential wrap tape accurate to ±0.001 in. (±0.02 mm) may be used.

11.2.2 *Wall Thickness*—Measure the wall thickness in accordance with the applicable sections of Test Method D 2122. Make sufficient readings, a minimum of six, to ensure that the minimum thickness has been determined. Use a cylindrical anvil tubing micrometer accurate to ±0.001 in. (±0.02 mm).

11.3 *Pipe Flattening*—Flatten three specimens of rounded pipe, 6-in. (150-mm) long, between parallel plates in a suitable press until the distance between the plates is 40 % of the outside diameter of the pipe. The rate of loading shall be uniform and such that the compression is completed within 2 to 5 min. Remove the load and examine the specimens for evidence of splitting, cracking, or breaking.

11.4 *Impact Resistance*—Determine the impact resistance of the rounded pipe in accordance with the applicable section of Test Method D 2444, using a 20-lb (9-kg) Tup A and the flat plate Holder B. Test six specimens each 6 in. (150 mm) long at the impact levels given in Table 2. All shall pass. If one fails, test another six specimens; eleven passes out of twelve tested shall be acceptable.

11.5 *Pipe Stiffness*—Determine the pipe stiffness for rounded pipe specimens using Test Method D 2412. Test three specimens, each 150 mm (6 in.) long. The pipe stiffness of each specimen at 5 % deflection shall equal or exceed the minimum value listed in Table 3.

11.6 *Extrusion Quality*:

11.6.1 *Acetone Immersion*—Tests shall run in accordance with Test Method D 2152 on rounded pipe samples. This procedure is used for determining the extrusion quality of extruded PVC plastic pipe as indicated by reaction to immersion in anhydrous acetone. It is applicable only for distinguishing between unfused and properly fused PVC.

11.6.2 *Heat Reversion*—Tests shall be run in accordance with Practice F 1057 on rounded pipe samples. The rounded pipe shall not exhibit any of the effects listed in the suggested Interpretation of Results in Practice F 1057.

11.7 *Flexural Properties*—Tests shall be run on rounded pipe samples in accordance with Test Method I—Procedure A of Test Method D 790. Test specimens shall be cut in the longitudinal direction and oriented on the test machine with the interior surface of the rounded sample against the loading supports.

12. Inspection

12.1 Inspection of the material shall be made as agreed upon between the purchaser and the seller as part of the purchase contract.

13. Retest and Rejection

13.1 If the results of any test(s) do not meet the requirements of this specification, the test(s) may be conducted again in accordance with an agreement between the purchaser and the seller. There shall be no agreement to lower the minimum requirement of the specification by such means as omitting tests that are a part of the specification, substituting or modifying a test method, or by changing the specification limits. In retesting, the product requirements of this specification shall be met, and the test methods designated in the specification shall be followed. If, upon retest, failure occurs, the quantity of product represented by the test(s) does not meet the requirements of this specification.

14. Certification

14.1 When specified in the purchase order or contract, a manufacturer's certification shall be furnished to the purchaser that the material was manufactured, sampled, tested, and inspected in accordance with this specification, and has been found to meet the requirements. When specified in the purchase order or contract, a report of the test results shall be furnished. Each certification so furnished shall be signed by an authorized agent of the manufacturer.

15. Product Marking

15.1 Pipe in compliance with this specification shall be clearly marked at intervals of 5 ft (1.5 m) or less as follows:

15.1.1 Manufacturer's name or trademark and code,

15.1.2 Nominal outside diameter,

15.1.3 The PVC cell classification, for example "12334," "~~12344~~," or "13223"

15.1.4 The legend "~~DR 41 Folded PVC Pipe,~~" "~~DR 35 Folded PVC Pipe,~~" or "~~DR 50~~ XX Folded PVC Pipe,"

15.1.5 This designation "Specification F 1504," and

15.1.6 Length marker and linear distance label, for example: "15/yd" or "223/yd" ("15/m").

16. Packaging

16.1 The full length and wall thickness of the folded PVC pipe is heated and coiled onto a reel in a continuous length for storage and shipping. The minimum diameter of the reel drum or core shall meet the manufacturer's specifications.

17. Quality Assurance

17.1 When the product is marked with this ASTM designation; (F 1504), the manufacturer affirms that the product was manufactured, inspected, sampled, and tested in accordance with this specification and has been found to meet the requirements of this specification.

18. Keywords

18.1 installation—underground; plastic pipe—thermoplastic; poly(vinyl chloride) (PVC) plastic pipe; rehabilitation

SUPPLEMENTARY REQUIREMENTS

GOVERNMENT/MILITARY PROCUREMENT

These requirements apply only to federal/military procurement, not domestic sales or transfers.

S1. Responsibility for Inspection

S1.1 Unless otherwise specified in the contract or purchase order, the producer is responsible for the performance of all inspection and test requirements specified herein. The producer may use his own or any other suitable facilities for the performance of the inspection and test requirements herein, unless the purchaser disapproves. The purchaser shall have the right to perform any of the inspections and tests set forth in this specification where such inspections are deemed necessary to ensure that material conforms to prescribed requirements.

NOTE S1.1—In U.S. federal contracts, the contractor is responsible for inspection.

S2. Packaging and Marking for U.S. Government Procurement

S2.1 *Packaging*—Unless otherwise specified in the contract, the materials shall be packaged in accordance with the supplier's standard practice in a manner ensuring arrival at destination in satisfactory condition and that will be acceptable to the carrier at lowest rates. Containers and packing shall comply with Uniform Freight Classification rules or National Motor Freight Classification rules.

S2.2 *Marking*—Marking for shipment shall be in accordance with Fed. Std. No. 123 for civil agencies and MIL-STD-129 for military agencies.

NOTE S2.1—The inclusion of U.S. Government procurement requirements should not be construed as an indication that the U.S. Government uses or endorses the products described in this specification.

ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM International Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
